

Clean version of the amended claims:

- 1) A duplex electrical connector comprising:
- a) a housing having a cylindrical outbound end, a generally oval inbound end, and an interior channel linking said inbound and said outbound end;
 - b) one or more tubular spring steel cable retainers secured in said inbound end, each of said retainers including a set of inwardly extending tangs to receive and engage an armored cable inserted from said inbound end and guide said cable toward said cylindrical outbound end in a manner that separate cables are advanced to said outbound end without mutual interference, said inwardly extending tangs restricting removal of said cable by force applied on said cable from said inbound end; and
 - c) a tubular spring steel adapter secured to said cylindrical outbound end of said housing, said adapter having outwardly extending tangs.

- 6) The duplex electrical connector of claim 1 including a viewing window in said housing and a polymeric panel that may be snap fitted into or out of said viewing window as desired.
